

THREADED

A system for working across analog and digital

HOW WORK GETS DONE WITH AI

Four tools. One system. Your thinking on paper, your work in AI — connected, not competing.

<p>IDEA CAPTURE</p> <p>TIGHT TAP</p>	<p>A raw idea before it has a name. One line, one thought, captured before it disappears. Date it, note the domain, and mark whether it's worth opening an AI thread.</p>	<p>REACH FOR IT WHEN</p> <p><i>An idea lands and you're not in front of a screen — or you are and you don't want to lose momentum.</i></p>
<p>PROJECT ANCHOR</p> <p>TETHER THREAD</p>	<p>One per project. Lives on your clipboard. Captures the goal, what's decided, what's still open, and every AI thread and file created. Keeps you connected to the project even when you're away from a screen.</p>	<p>REACH FOR IT WHEN</p> <p><i>A Tight Tap idea graduates to a real project — or any time you're sitting somewhere and want to think through your work without opening a file.</i></p>
<p>WORKING SESSION</p> <p>THE TRACK</p>	<p>One per working session. Three pages: send page one ahead so the other person comes prepared. Log what happens in real time on page two. Close out on page three and photograph it before you leave.</p>	<p>REACH FOR IT WHEN</p> <p><i>You're sitting down to work with someone — or working solo through a focused session where decisions and actions need to be captured as they happen.</i></p>
<p>WEEKLY REVIEW</p> <p>TETHER TOUCH</p>	<p>Your weekly pulse check. Front side: flip through every active Tether Thread and record what moved, what stalled, and what matters most. Back side: scan your Tight Taps and confirm the threads that were supposed to get opened actually did.</p>	<p>REACH FOR IT WHEN</p> <p><i>Once a week — couch, clipboard, no screen required. The whole review takes less time than you think.</i></p>

THE SYSTEM THAT HOLDS IT ALL TOGETHER. ANALOG AND DIGITAL,
WORKING IN PARALLEL — NOTHING FALLS THROUGH THE CRACKS.
